

App Development Brief

Project Overview

The app is a football-focused mobile application combining live sports information, AI-powered interaction, in-app predictions (admin and user-driven), user engagement through trivia and rewards, monetization via ads, and real-time notifications. The goal is to keep users informed, entertained, and actively engaged.

Core Features

1. AI Integration (Chat Assistant)

- In-app AI chatbot for football questions, match insights, and app support.

2. User Accounts / Client Hub

- User registration & login.
- Profile dashboard with coin balance and activity access.

3. Live Scores

- Real-time match scores, fixtures, and results via reliable APIs.

4. Football News

- Football-related news feed with summaries and full article views.

5. Football Broadcast

- Match broadcast schedules and/or live streaming (rights-compliant).

6. Predictions (Admin + User)

- Admin drops official match predictions within the app.
- Users can also submit their own predictions.
- Predictions can be tied to coins, trivia rewards, or leaderboard rankings.

7. Trivia, Coins & Jackpot Raffle

- Football trivia games.
- Users earn coins and enter raffles or jackpot draws.

8. Ads Integration

- AdSense or equivalent ads (banner, interstitial, rewarded).

9. Push & Popup Notifications

- Match alerts, goals, trivia updates, predictions drops, jackpot draws, and announcements.

Admin Panel

- Manage users, trivia, predictions (admin drops), jackpots, coins, news, and notifications.

Technical Requirements

- Platforms: Android and iOS (both required).
- Secure backend and scalable API architecture.
- Optimized for performance and security.

Success Goal

To build a highly engaging football app that encourages daily use, monetizes effectively, and scales for future features.
